Material Dialog - Android

Library to implement **animated**, beautiful, rich & stylish **Material Dialog** in android apps easily.

-Shreyas Patil

Implement searchview in toolbar android.

This should be all, but if you haven't done this already you need a SearchView menu item: res/menu/example.xml Finally add this inside the relevant activity tag in the manifest file: AndroidManifest.xml Please note: The @string/search string used in the examples should be defined in values/strings.xml, also don't forget to update the reference to com.example for your project. There could be better ways to do this, but since you haven't posted your activity code I will have to improvise and assume you have a list like this at the start of your activity: private List items = db.getItems(); ExampleActivity.java private List items; private Menu menu; @Override @TargetApi(Build.VERSION_CODES.HONEYCOMB) public boolean onCreateOptionsMenu(Menu menu) { getMenuInflater().inflate(R.menu.example, menu); this.menu = menu; if(Build.VERSION.SDK_INT >= Build.VERSION_CODES.HONEYCOMB) { SearchManager manager = (SearchManager) getSystemService(Context.SEARCH_SERVICE); SearchView search = (SearchView) menu.findItem(R.id.search).getActionView(); search.setSearchableInfo(manager.getSearchableInfo(getComponentName())); search.setOnQueryTextListener(new OnQueryTextListener() { @Override public boolean onQueryTextChange(String query) { loadHistory(query); return true; } }); } History @TargetApi(Build.VERSION_CODES.HONEYCOMB) private void loadHistory(String query) { if(Build.VERSION.SDK_INT >= Build.VERSION_CODES.HONEYCOMB) { // Cursor String[] columns = new String[] { "id", "text" }; Object[] temp = new Object[] { 0, "default" }; MatrixCursor cursor = new MatrixCursor(columns); for(int i = 0; i < items.size(); i++) { temp[0] = i; temp[1] = items.get(i); cursor.addRow(temp); } // SearchView SearchManager manager = (SearchManager) getSystemService(Context.SEARCH_SERVICE); final SearchView search = (SearchView) menu.findItem(R.id.search).getActionView(); search.setSuggestionsAdapter(new ExampleAdapter(this, cursor, items)); } } Now you need to create an adapter extended from CursorAdapter: ExampleAdapter.java public class ExampleAdapter extends CursorAdapter { private List items; private TextView text; public ExampleAdapter(Context context, Cursor cursor, List items) { super(context, cursor, false); this.items = items; } @Override public void bindView(View view, Context context, Cursor cursor) { text.setText(items.get(cursor.getPosition())); } @Override public View newView(Context context, Cursor cursor, ViewGroup parent) { LayoutInflater inflater = (LayoutInflater) context.getSystemService(Context.LAYOUT_INFLATER_SERVICE); View view = inflater.inflate(R.layout.item, parent, false); text = (TextView) view.findViewById(R.id.text); return view; } } A better way to do this is if your list data is from a database, you can pass the Cursor returned by database functions directly to ExampleAdapter and use the relevant column selector to display the column text in the TextView referenced in the adapter. AndroidApps/Applications/Mobile Development This example demonstrates how do I use SearchView in android. Step 1 - Create a new project in Android Studio, go to File = New Project and fill all required details to create a new project Step 2 - Add the following code to res/layout/activity_main.xml Step 3 - Add the following code to src/MainActivity.java import android.support.v7.app.AppCompatActivity; import android.os.Bundle; import android.widget.AdapterView; import android.widget.AdapterView.OnItemClickListener; import android.widget.AdapterView.OnItemSelectedListener; import android.widget.ArrayAdapter; import android.widget.SearchView; import android.widget.Toast; import java.util.ArrayList; public class MainActivity extends AppCompatActivity { SearchView searchView; ListView listView; ArrayList list; ArrayAdapter adapter; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); searchView = findViewById(R.id.searchView); listView = findViewById(R.id.listView); list = new ArrayList(); list.add("Apple"); list.add("Banana"); list.add("Pineapple"); list.add("Orange"); list.add("Mango"); list.add("Grapes"); list.add("Lemon"); list.add("Melon"); list.add("Watermelon"); list.add("Papaya"); adapter = new ArrayAdapter(this, android.R.layout.simple_list_item_1, list); listView.setAdapter(adapter); searchView.setOnQueryTextListener(new SearchView.OnQueryTextListener() { @Override public boolean onQueryTextSubmit(String query) { if(list.contains(query)){ adapter.getFilter().filter(query); }else{ Toast.makeText(MainActivity.this, "No Match found", Toast.LENGTH_LONG).show(); } return false; } @Override public boolean onQueryTextChange(String newText) { adapter.getFilter().filter(newText); return false; } }); } } Step 4 - Add the following code to androidManifest.xml You can now customize list items by adding additional text or image views to the layout and populating them with data in the adapter.
